Valve on Stand for Testing

# Is Your Valve Due For Its 5 Year Maintenance?

Valves are the backbone of your system's performance, and like any critical component, they require regular maintenance to stay reliable. That's why industry standards recommend recertification every 5 years. Our Recertification and Retesting services help identify wear, prevent failures, and protect your investment before problems arise. When the pressure's on, you need equipment you can trust.

## Locating The Date on Your Valve

Locating the Date

To find out if your valve is due, or getting close to needing service, start by locating the stamped date on the bottom right of the valve (above the blue line). You'll also find the same marking on the opposite side of the valve bonnet. Checking this date is a quick and easy way to stay ahead of potential issues and ensure your equipment remains compliant and reliable.

## Confident Recertification Starts with Ratermann

Recertification and testing

Recertifying your valves keeps your tanks and equipment safe to allow for

- ASME restamping of relief valves and pressure verification.
- Valves to be brought to back new conditions after a 5 year cycle
- Proper oxygen cleaning and repairing, especially in valves that fail in the field.

Our state-of-the-art testing equipment ensures everything meets ASME standards perfectly.

### Ratermann Services:

- Anderson-Greenwood
- Herose
- Cash Valve
- Kunkle
- Plus many other trusted valve brands across the industry!

## Rapid Service, Reliable Results

Reliable turnaround time

We understand how critical it is to keep your operations running smoothly, that's why our Service Department is committed to consistently fast turnaround times.

### Turn around times for our Service Department

- Standard: 6-10 business days
- Rush: Less than 24 hours

# Piping, Fittings, and Pressure Relief Solutions!

Cleaned, Compliant, and Ready

Ratermann offers a full line of oxygen-cleaned piping components, fittings, and pressure relief devices designed for cryogenic, medical, and industrial gas applications. From copper to stainless steel, every product is cleaned, capped, and prepped for immediate installation.

Our piping and fittings oxygen cleaning conforms to both CGA 4.1 and ASTM G 93 C specifications, giving you added assurance for code compliance and system safety.

## Cleaned Piping for Critical Applications

### Key Highlights for our piping:

- Materials: Oxygen-cleaned copper and stainless steel piping
- Sizes: Wide range of diameters and lengths in stock
- Fittings & Valves: Prepared for oxygen service, cleaned to ASME and CGA standards
- Pressure Reliefs: Complete offering for tanks, pipelines, and fill plants
- Compliance: Meets CGA, DOT, and ASME requirements
- Fast Shipping: Most items available for same-day shipping

## Full Line of Pressure Reliefs

Ratermann offers a complete selection of pressure relief devices to support both liquid (LPR) and gas (PR) system requirements. Whether you're outfitting a cryogenic tank, fill plant, or pipeline, our reliefs are cleaned, tested, and compliant with industry standards. Available in a range of set pressures and sizes, they're ready to ship and built to perform under pressure.

\*LPR's are ineligible for Oxygen cleaning.

## Reliable Solutions for Trapped High Pressure

Looking to release high-pressure liquid or gas trapped between pipes? We offer pressure relief valves, along with candy cane and T-configured setups, designed to safely manage trapped pressure. Chat with our team to identify the right relief solution and ensure your system stays protected from over-pressurization.
